

THE PROBLEM

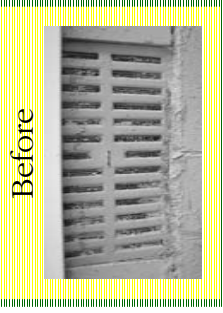

Proper venting of homes with crawlspaces has long been a challenge for homeowners. Many homeowners have little or no knowledge of the vitally important role that ventilation play in the longevity of their homes. Proper crawlspace ventilation helps prevent the buildup of excessive moisture, which can create dry rot in wooden sub floors. People spend hundreds of thousands of dollars on their homes, but without proper ventilation the sub floor can literally dry rot out from under them. Improper crawlspace ventilation can therefore cause your sub floor to be weakened and in some cases severely and irreparable damaged.

Current vent options are not very effective.

Most homes have vents that limit airflow in warmer weather, but do

not seal well in winter. These vents also cannot be properly insulated, if desired by the homeowner, from the outside, requiring the homeowner to maneuver through the crawlspace to service the vents in order to reduce heat loss in the winter.

More than 18 million homes in the United States have crawlspaces where homeowners face these ventilation dilemmas every year. This problem is especially severe near lakes, lowland areas, and high water tables.

Before

Our Company now provides the **Ultra CSV®** crawlspace vent to aid homeowners in dealing with these problems.

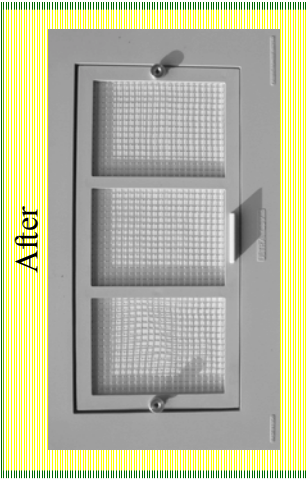

The **Ultra CSV®** is a new crawlspace vent system which can be used for replacement of existing vents or in new home construction.

This vent is easily serviced: opening and closing from the outside, insulation, if desired, can be added through the vent opening.

Rodents, mice, etc. will not be able to enter the home due to a heavy gauge screen material used.

Air leakage, when the vent is closed is virtually non-existent due to a solid panel insert. Maximum ventilation is achieved when the panel is removed.

We believe you cannot buy or use a better vent system with the same high quality, ease of use and installation, and durability.

After

Building code for crawlspace vents:

Section R408-1 of the Michigan Residential Code 2000 states: 1 square foot of ventilation per 150 square feet of floor space. One such vent opening within 3 feet of the corner of each building wall.

Testimonials:

We fully believe that the Ultra CSV vent would be a great asset to any residence with a crawlspace. Doing heating and cooling, we are in many crawlspaces. Crawlspaces without good ventilation have been known to cause some hazardous and then expensive situations. Using this product can be beneficial in many ways in our line of work. Better yet, good ventilation is much safer for our employees and the homeowners. Having worked with Mr. Betz for six wonderful years, we can see what a great product this is, and every homeowner with a crawlspace should consider using it.

A-Tech Heating & Cooling, Inc., Houghton Lake, MI

When I first saw your crawlspace vents at the Houghton Lake Builders Show, I thought that they were the best vents that I had ever seen. Plus the fact that I could open and close and insulate my vents all from the outside, was exactly what I wanted. I never have to crawl around my crawlspace again! Now that my vents are installed, they look great and I can feel the air flowing from my crawlspace. Thank you for a great product.

Eugene F. Bentlew, Houghton Lake, MI

You can prevent damage to your home, save money and avoid potential health problems by controlling moisture.

Ultra CSV® crawlspace vents work because they allow more airflow under your home to help reduce moisture in the summer. **AND, you can close off the airflow and heat transfer in winter easily from the outside of your home.**

Do You Have...

- Cold Floors?
- High Heat Bills?
- Allergies?
- A musty smell in your house?
- Dampness in the house or crawlspace?
- Mice or rodents in or under your house?

Do You Want The Potential

To...

- Have warmer floors?
- Save on heating bills?
- Reduce dampness?
- Keep mice and rodents out?

Why Replace Your Current Crawlspace Vents With **Ultra CSV®** Crawlspace Vents?

To...

- ...Increase crawlspace airflow by over 50%
- ...Save money by helping to reduce heat loss through crawlspace vents
- ...Aid and assist in reducing moisture
- ...Keep rodents and mice out
- ...Insulate your crawlspace from outside your house (if recommended)
- ...Help prevent your pipes from freezing
- ...Easy to use: open and close from the exterior
- ...Easy to clean
- ...Heavy duty screen
